

Interpreting physical and population maps

1. What are the four parts of each map and what is their purpose

a. -

b. -

c. -

d. -

2. What are some physical features that are commonly found on physical maps? Identify whether each physical feature would increase the population or decrease the population in that area.

3.

a. -

b. -

c. -

d. -

4. For each city, write a "because" sentence that justifies where each city is located based on its relationship to physical features.

a. -

b. -

c. -

d. -

Reflection:

Can I make connections between physical features and where cities are located?

Can I apply cartography skills (parts of a map) in order to successfully create my own map?
